Reference Number: **EIR**

Dear

We refer to your request for information submitted to Yorkshire Water dated 25 January 2026 :

"I am writing to request the following information in relation to Colburn Sewage Treatment Works, Colburn Lane, Catterick Garrison DL9 4PB.

- 1, How many trips both to and from the works are undertaken on a weekly basis?*
- 2. What are the approved delivery and collection times and confirmation that they are adhered to?*
- 3. What is the geographic area of deliveries to the works from existing housing/industrial properties?*
- 4. How may discharges into the River Swale have taken place over the last 12 months. What is the location of the discharge points?*
- 5. What is the current capacity of the works in relation to existing and future developments eg. 522 houses plus?*
- 6. Are there any plans to update the facilities at the treatment works?"*

Included with this email are the response to your questions.

1. How many trips both to and from the works are undertaken on a weekly basis?

There is an average of 12 tankers per day

2. What are the approved delivery and collection times and confirmation that they are adhered to?

We have reviewed a sample of visits and the average delivery and collections times are within 6am and 6pm, however there may be occasional emergency work outside of these times.

Please be aware there is a current capital scheme which has resulted in an increase of tankers from Swinton Masham Sewage Treatment Works, this may also result in out of hours visits.

3. What is the geographic area of deliveries to the works from existing housing/industrial properties?

The locations that this site receives deliveries from are other Yorkshire Water Sewage Treatment Works in the North West of North Yorkshire.

4. Discharges into the River Swale have taken place over the last 12 months

The data requested is readily available to the public in the public domain via the following link: <https://www.yorkshirewater.com/environment/storm-overflows/event-duration-monitoring/>

If you go to the section 'individual start and stop events' you will be able to access the information held for 2024 and 2025 and you can filter the

spreadsheets for the sites you have identified. All of the stop/start data for 2024 is on the website.

5. Current capacity of the works in relation to existing and future developments:

The sewage works is currently treating the maximum capacity, and cannot accept any additional development flows without upgrade. If and when developments receive planning permission then we will work to put capacity in place to serve the developments, and these are likely to be covered by the Phos removal scheme mentioned below.

6. Plans to update the facilities at the treatment works

The works has a scheme to add Phosphorus removal to the site with a regulatory date of 31/3/2030. Future population forecasts will be built into the design of this scheme.

We trust that the provision of this data satisfies your request. In accordance with the Environmental Information Regulations 2004, if you are not satisfied with this reply to your request you can ask for an internal review. A request for an internal review must be submitted within 40 working days by contacting the Data Protection Team.

Thank you for contacting Yorkshire Water.

Yours sincerely,

Data Protection Team
