Dear

We refer to your request for information submitted to Yorkshire Water dated 1 October 2025:

"On reflection, it appears I asked the wrong question. I should have asked if the capacity of the Malton sewerage system has been increased since 2010. Given the amount of sewage spilling into the River Derwent, I think the answer is no."

Included with this email is our response.

We have reviewed the network scheme's and in terms of network capacity increases since 2010 there has been one which was undertaken on the Storm Spills Reduction Programme. We have installed 343m³ of storage between the Welham Road North CSO and Malton Norton SPS, this is for the reduction in spills during wet weather, but it will also have positive benefit for issues in dry weather and pump/power loss as the storage would be utilised, this work was completed in 2025.

We also have investigation works ongoing at Malton Holme Field CSO as part of the AMP8 programme to understand what work is required to meet our spill reduction drivers, this may include some form of storage, but we cannot confirm at this time as we do not have any defined outputs from this investigation.

The hydraulic capacity, the permitted flow to full treatment has not been increased by the Environment Agency since 2010.

We trust that the provision of this data satisfies your request. In accordance with the Environmental Information Regulations 2004, if you are not satisfied with this

reply to your request you can ask for an internal review. A request for an internal review must be submitted within 40 working days by contacting the Data Protection Team.

Thank you for contacting Yorkshire Water.

Yours sincerely,

Data Protection Team
